

Kestrel Bay Provisions

FY2026 financial planning & analysis model

Budget vs actual · price-volume-mix · rolling 8+4 forecast · scenarios · working capital · channel economics

A fictional BC specialty-food distributor: 24 products, 4 channels, 3 regions, 32 months of synthetic data. Every figure is a live formula, Power Query step or DAX measure over the source tables. Nothing is pasted in.
Built by Kush Patel - github.com/KushPatel29/excel-fpa-model

Model status All 31 checks pass [Open the checks →](#)

Five questions it answers, live from the model

Are we on budget, and if not, why?	YTD revenue +3.6% against budget, EBITDA -13.2%. Biggest gross-margin drag: unit cost. PVM →
Where will the year land?	EBITDA \$2.3M on the Base scenario, against a budget of \$2.7M. Forecast →
What would it take to hit budget?	A 2.6% price rise on the open months, or 11% more volume. Scenarios →
Where is cash tied up?	A 20.6-day cash cycle; \$58K of stock sits above its shelf-life risk line. WorkingCapital →
Which channels earn the growth?	Grocery Retail grew cases most (+16% vs budget) at \$21.58 contribution a case; Online Direct earns most, \$50.91. Channels →

Sheets		
Sheet	What it shows	Excel on show
Dashboard	One page for the board: KPIs, bridges, scenarios and a written summary that rewrites itself.	Formula-driven narrative, waterfall and combo charts, sparklines, LET, SORTBY, named LAMBDAs
PnL	Monthly P&L: outlook (actuals + forecast), budget, prior year, variances, YTD.	SUMIFS over tables, FAVVAR / SAFEDIV LAMBDAs, conditional formatting, sparklines
PVM	Price-volume-mix on 24 segments; gross-margin and EBITDA bridges.	Exact four-effect decomposition, XMATCH driver tags, waterfall
Forecast	8+4 driver forecast by category, budget accuracy, statistical cross-check.	XLOOKUP, WAPE and bias, FORECAST.ETS
Scenarios	Base / upside / downside, price × volume grid, tornado, gap to budget.	What-if data tables (1- and 2-variable), data validation, SORTBY + HSTACK
WorkingCapital	DSO, DIO, DPO and the cash cycle; stock against shelf life.	DAYSO LAMBDA, trailing windows, data bars, risk flags
Channels	Channel economics by formula and by data model, reconciled.	Power Pivot + DAX (TREATAS), PivotTable with slicers, CUBEVALUE
Checks	31 controls that prove the model ties out.	Reconciliations with a tolerance
Assumptions	Every input and scenario driver in one place.	Named inputs, validation
PQ Budget	The budget, unpivoted and priced.	Power Query (M): unpivot, merges, types
Data Sales	Source tables, loaded unchanged from the CSVs.	Excel tables, structured references

How to use it

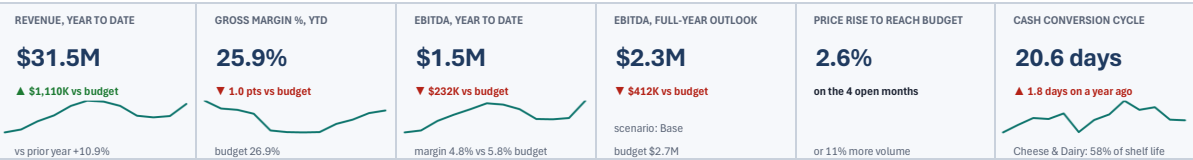

1 Pick a scenario	Scenarios!C4. Every sheet, chart and sentence follows.
2 Test your own view	Price and volume overlays in Scenarios!C5:C6, on top of the scenario.
3 Re-cut from an earlier close	Change the as-of month on Assumptions, then Data > Refresh All.
4 Explore the data model	The slicers on Channels filter a PivotTable built on DAX measures.

Conventions

+1.5%	Input: blue on yellow. Change these; everything else is calculated.
1,234	Calculated: black. Links from another sheet are green on Scenarios.
Forecast month	Blue shading marks forecast months; unshaded months are actuals.
+1,234 (1,234)	Variances are signed so favourable is positive (green) and unfavourable is in brackets (red), for revenue and cost lines alike.

Kestrel Bay Provisions: FY2026 performance and outlook

Actuals through August 2026 - forecast September to December - scenario: Base - All 31 checks pass

What the numbers say

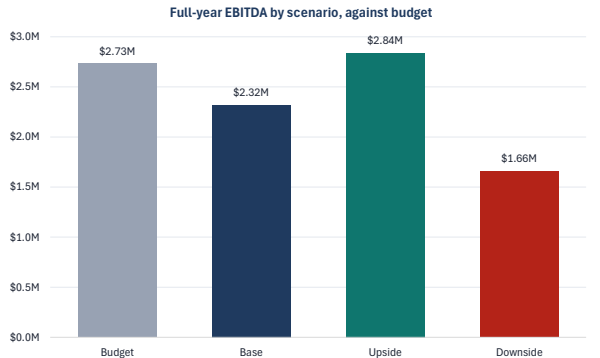

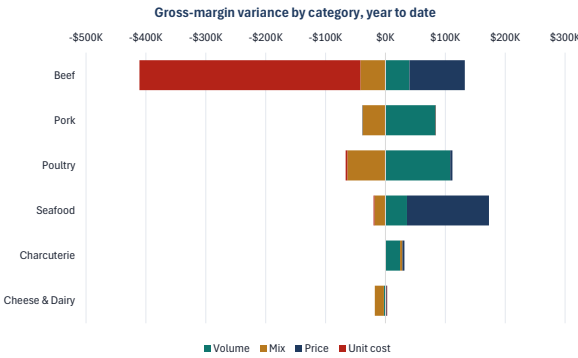

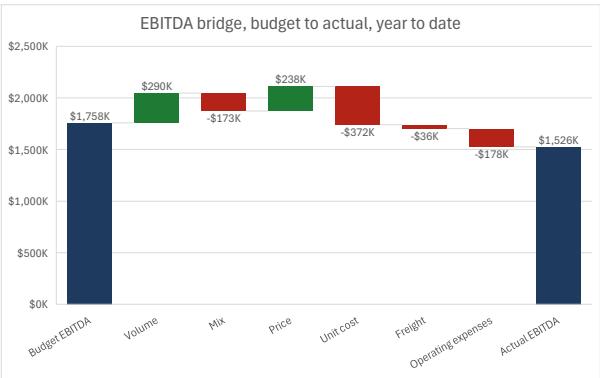

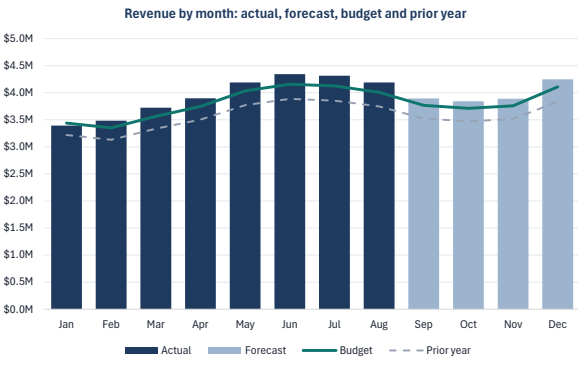

Revenue is \$1.1M ahead of budget through August (+3.6%), yet EBITDA is \$232K behind (-13.2%). The growth has not reached the bottom line.

Gross margin, year to date: volume +\$290K, price +\$238K, mix -\$173K, unit cost -\$372K. Mix is negative because volume shifted toward Grocery Retail, the channel that earns least per case; Beef costs rose faster than its prices.

Below gross margin, freight -\$36K and operating expenses -\$178K (mostly Warehouse & Logistics) leave EBITDA at \$1.5M against a budget of \$1.8M.

Full year on the Base scenario: EBITDA \$2.3M against a budget of \$2.7M. Closing the \$412K gap takes a 2.6% price rise on the 4 open months, or 11% more volume: price is the realistic lever.

Cash: DSO 32 days, DIO 16, DPO 27, a 20.6-day cycle. Cheese & Dairy holds 52 days of stock, 58% of its 90-day shelf life: \$58K of it sits above the 50% risk line, stock that needs a markdown or a slower buy before it becomes a write-off.

Largest gross-margin movers against budget, year to date				Full year by scenario			
Segment	Main driver	GM vs budget	Scenario	Revenue	EBITDA	Margin	vs budget
Beef - Restaurants	Unit cost	(151,620)	Base	\$47.4M	\$2.3M	4.9%	(\$412K)
Seafood - Grocery Retail	Price	+71,982	Upside	\$48.1M	\$2.8M	5.9%	+\$104K
Beef - Hotels & Institutions	Unit cost	(59,108)	Downside	\$46.6M	\$1.7M	3.6%	(\$1,075K)
Poultry - Grocery Retail	Volume	+51,867	Budget	\$45.8M	\$2.7M	6.0%	
Seafood - Restaurants	Price	+51,479					

Kestrel Bay Provisions is fictional and every figure is synthetic. Built in Excel by Kush Patel: github.com/KushPatel29/excel-fpa-model

Actuals through August 2026, forecast after (shaded). Scenario: Base. Favourable variances are positive; unfavourable ones in brackets

Kestrel Bay Provisions (fictional) - FP&A model

Price-volume-mix: why margin moved against budget

Gross-margin variance split four ways on 24 category × channel segments. Each segment's change in cases is valued at the budget's average margin per case (volume) and at its own margin's distance from that average (mix); price and cost are per-case changes on actual cases. The four effects add up to every segment's variance exactly: column V is zero.

Budget accuracy, all categories: WAPE

3.9%

Weighted absolute percentage error: the share of cases the budget placed in the wrong category-month.

Bias: (budget – actual) ÷ actual

-3.4%

Below zero means the budget under-called volume: the year sold more cases than planned.

Cross-check: a statistical forecast of total revenue (FORECAST.ETS, 12-month seasonality)

Month	Jan 26	Feb 26	Mar 26	Apr 26	May 26	Jun 26	Jul 26	Aug 26	Sep 26	Oct 26	Nov 26	Dec 26	Open months
Driver forecast									3,894,908	3,843,016	3,886,985	4,248,799	15,873,707
FORECAST.ETS									3,975,498	3,920,618	3,962,883	4,296,635	16,155,635
Driver vs statistical									-2.0%	-2.0%	-1.9%	-1.1%	-1.7%

Over the open months the driver forecast sits 1.7% below a purely statistical projection of the same history. A gap this size says the drivers, not the trend, are doing the work: check them before trusting either.

Scenarios, sensitivities and the gap to budget

Pick a scenario in C4 and every sheet follows. The tables below are Excel what-if data tables: they re-run the whole forecast for each scenario and for every price × volume pair.

Scenario	Base	scenario 1
Price overlay	0.0%	Base, Upside or Downside: the driver sets are on Assumptions. Added to the scenario's price driver.
Volume overlay	0.0%	Added to the scenario's volume driver.

Live outputs for the selected scenario, full year	
FY revenue	47,407,338
FY gross margin	12,300,856
FY EBITDA	2,319,180
FY EBITDA margin	4.9%
FY EBITDA vs budget	(412,477)

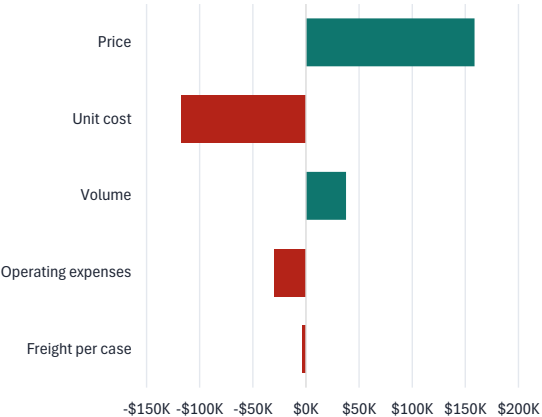

Scenario comparison, full year: a one-variable data table on C4					
Scenario	Revenue	Gross margin	EBITDA	EBITDA margin	EBITDA vs budget
Live selection	47,407,338	12,300,856	2,319,180	4.9%	(412,477)
Base	47,407,338	12,300,856	2,319,180	4.9%	(412,477)
Upside	48,128,798	12,791,327	2,836,094	5.9%	+104,437
Downside	46,620,002	11,701,125	1,656,743	3.6%	(1,074,914)
Budget	45,768,802	12,389,803	2,731,657	6.0%

+3%		2,539,901	2,625,064	2,710,228	2,795,391	2,880,555	2,965,718	3,050,881

Which driver matters most: full-year EBITDA impact of one step on each driver		
Step	1.0%	Exact, not an estimate: the forecast is linear in each driver.
Driver	FY EBITDA impact	Rank
Volume	+37,820	3
Price	+158,737	1
Unit cost	(117,253)	2
Freight per case	(3,664)	5
Operating expenses	(29,887)	4

What would it take to hit budget?	
Full-year EBITDA gap to budget	412,477
Open-month revenue at trailing prices	15,873,707
Price rise needed on the open months	2.60%
...or extra volume at today's margins	10.9%
Budget needs \$412K more EBITDA than the Base outlook. That is a 2.6% price rise on the 4 open months, or 11% more volume at today's margins: price is the lever, volume is not.	

FY EBITDA impact of one step on each driver

Working capital: cash tied up, and stock close to its shelf life

Days are balances over the trailing 3 months of flow (91 days). Month-end balances from tbl_Balances; flows from tbl_Sales.

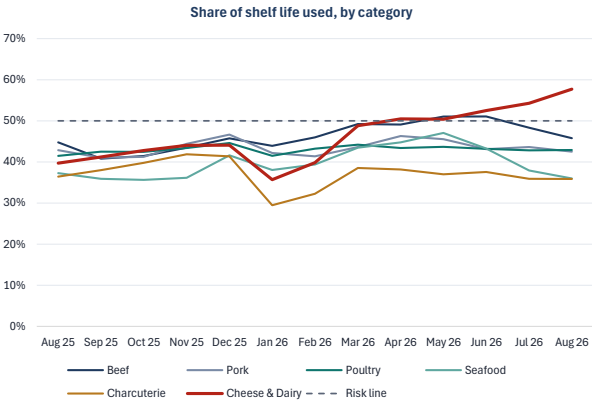

Trend: thirteen month-ends to the as-of month													
Month-end	Aug 25	Sep 25	Oct 25	Nov 25	Dec 25	Jan 26	Feb 26	Mar 26	Apr 26	May 26	Jun 26	Jul 26	Aug 26

As-of month: which stock is at risk?							
Category	Inventory	Trailing COGS	Days of inventory	Shelf life (days)	Share of shelf life used	Status	Stock above the risk line
Beef	587,387	3,337,254	16.0	35	46% OK		-
Pork	210,670	1,503,447	12.8	30	43% OK		-
Poultry	123,603	1,872,935	6.0	14	43% OK		-
Seafood	59,765	1,511,204	3.6	10	36% OK		-
Charcuterie	299,749	633,793	43.0	120	36% OK		-
Cheese & Dairy	433,881	760,237	51.9	90	58% At risk		57,939
All categories	1,715,055	9,618,871	16.2				57,939

Cheese & Dairy holds 52 days of stock, 58% of its 90-day shelf life: \$58K of it sits above the 50% risk line, stock that needs a markdown or a slower buy before it becomes a write-off.

Channel economics: where the growth came from, and what it earned

The same question answered twice: once with worksheet formulas, once from the Power Pivot data model (DAX measures, a PivotTable with slicers, CUBE functions). The two must agree.

Year to date by channel, Jan–Aug 2026: worksheet formulas														
Channel	Cases	Revenue	Gross margin	GM %	Freight	Contribution	Contribution %	Contribution per case	Budget cases	Budget contribution	Cases vs budget	Contribution vs budget	Revenue, data model	Engines agree
Restaurants	91,159	13,771,708	3,999,378	29.0%	242,694	3,756,685	27.3%	\$41.21	92,712	3,902,655	(1.7%)	(145,970)	13,771,708	Yes
Grocery Retail	73,082	9,612,126	1,771,577	18.4%	194,401	1,577,176	16.4%	\$21.58	63,157	1,409,876	+15.7%	+167,301	9,612,126	Yes
Hotels & Institutions	37,242	5,349,795	1,355,924	25.3%	99,163	1,256,761	23.5%	\$33.75	37,895	1,308,359	(1.7%)	(51,598)	5,349,795	Yes

Checks: the model proves its own numbers

All 31 checks pass

Controls						
#	Check	Expected	Actual	Difference	Status	Why it matters
1	Sales rows loaded = source	9,216.00	9,216.00	–	PASS	The load dropped or duplicated nothing.
2	Sales cases = source control total	827,305.00	827,305.00	–	PASS	
3	Sales revenue = source control total	114,701,479.40	114,701,479.40	–	PASS	
4	Budget unpivot keeps every row	3,456.00	3,456.00	–	PASS	Power Query's unpivot turned 12 month columns into 12 rows each.
5	Budget cases survive the unpivot	317,860.00	317,860.00	–	PASS	
6	Every budget row found its rate and category	–	–	–	PASS	
7	Budget revenue = cases × rate	45,768,802.14	45,768,802.14	–	PASS	A failed merge would silently price rows at zero.
8	Balances: receivables, payables and each category every month-e	256.00	256.00	–	PASS	
9	As-of month has actuals	–	–	–	PASS	
10	P&L revenue, closed months = ledger	31,533,631.17	31,533,631.17	(0.00)	PASS	Forecasting from a month that has not closed would mix actuals and gaps.
11	P&L opex, closed months = ledger	5,905,827.05	5,905,827.05	–	PASS	
12	P&L budget = budget table (FY revenue)	45,768,802.14	45,768,802.14	(0.00)	PASS	
13	EBITDA = revenue – COGS – freight – opex (FY)	2,319,179.86	2,319,179.86	–	PASS	
14	Variance block = outlook – budget (FY EBITDA)	(412,477.17)	(412,477.17)	–	PASS	
15	Outlook = actuals + forecast (FY revenue)	47,407,338.30	47,407,338.30	–	PASS	
16	Forecast volume = budget × run-rate on open months	111,088.52	111,088.52	–	PASS	Recomputed a second way, with array SUMIFS.
17	Formula engine = data model (YTD revenue)	31,533,631.17	31,533,631.17	–	PASS	
18	Formula engine = data model (each channel)	–	0.00	0.00	PASS	
19	DAX prior-year measure = formula prior year	28,445,829.00	28,445,829.00	–	PASS	Time intelligence in DAX checked against plain SUMIFS.
20	PVM effects explain the month's GM variance	(17,923.82)	(17,923.82)	(0.00)	PASS	
21	PVM effects explain the YTD GM variance	(17,279.22)	(17,279.22)	(0.00)	PASS	
22	PVM reconciles in every one of the 48 segment rows	–	0.00	0.00	PASS	Not just in total: each segment's effects equal its own variance.
23	EBITDA bridge closes	1,525,950.53	1,525,950.53	(0.00)	PASS	
24	Scenario table matches the live model	2,319,179.86	2,319,179.86	–	PASS	
25	Sensitivity grid centre = live EBITDA	2,319,179.86	2,319,179.86	–	PASS	The data table re-ran the same model the sheets show.
26	Tornado is exact: one price step	158,737.07	158,737.07	0.00	PASS	
27	Tornado is exact: two volume steps	75,639.25	75,639.25	0.00	PASS	
28	Inventory by category = balance-sheet inventory	1,715,054.62	1,715,054.62	–	PASS	
29	Category days of inventory roll up to headline DIO	16.23	16.23	–	PASS	
30	Dashboard revenue tile = P&L	31,533,631.17	31,533,631.17	–	PASS	
31	Dashboard EBITDA outlook tile = P&L	2,319,179.86	2,319,179.86	–	PASS	

Source control totals, taken from the CSVs when the workbook was built

	Control total	Value	Source
Sales rows		9,216	data/fact_sales.csv, row count
Sales cases		827,305	data/fact_sales.csv, sum of units
Sales net revenue		114,701,479.40	data/fact_sales.csv, sum of net_revenue
